Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NyAlternate names: glutathione S-transferase class mu 9
Cispecies: Sus scrofa domestica (domestic pig)
Cispecies: Sus scrofa domestica (domestic pig)
Cispecies: Sus scrofa domestica (domestic pig)
Cispecies: Sus scrofa domestica (domestic pig)
Ciscession: S71870
Ricession: S71870
Biochem. J. 317, 879-884, 1996
A;Title: Characterization of pig liver glutathione S-transferases using HPLC-electrospray
A;Reference number: S71876
A;Accession: S71870
A;Accession: S71870
A;Accession: S71870
A;Accession: S71870
A;Accession: S71870
C;Comment: At least five species-independent classes of cytosolic glutathion transferases
C;Comment: At least five species-independent classes of cytosolic glutathion transferases
C;Complex: dimer
C;Complex: dimer
C;Complex: dimer
C;Complex: detering a nucleophilic conjugation of intracellular glutathione to a valuethway: detoxification; xenobiotics metabolism
A;Description: catalyzes the nucleophilic conjugates facilitates their further metabolism
A;Description: catalyzes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            dermorphin (Lys-7) [validated] - two-colored leaf frog
C;Species: Phyllomedusa bicolor (two-colored leaf frog)
C;Species: D-bcc-1993 #sequence_revision 13-Mar-1997 #text_change 18-Aug-2000
C;Accession: S36662

Miescher S,

Hofmann A, Fisch I;

Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease of the newborn (HDN).

Claim 1; Page 12; 19pp; English.

The present sequence represents a peptide capable of binding Rhesus D antibodies (I). Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (M1) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognishing an epitope of Rhesus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are mimotopes which differ in their amino acid sequence from the amino acid

```
ö
           properties of Rhesus D protein, and No Peptines No Mill. [I] is used to manufacture an agent for the diagnosis, therapy or prophylaxis of manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. haemolytic diseases of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes peptides capable of binding Rhesus D antibodies (I). Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (MI) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU03601-AAU03722 represent Group B Streptococcus (Streptococcus agalactiae) amino acid sequences of the invention. S. agalactiae is an encapsulated bacterium which is a major pathogen of humans causing sepsis and meningitis in neonates as well as adults. The S. agalactiae antigenic polypeptides are used to vaccinate against Group B Streptococcus infections, particularly to prevent infection in new born children arising from the maternal genital tract. An immunogenic composition is useful in the preparation of a medicament for the treament or prophylaxis of Group B Streptococcus infection. The invention does not have the disadvantages of varied response rate associated with prior art capsid polysaccharide vaccination against Group B Streptococcus
mimotopes which differ in their amino acid sequence from the amino acid sequences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (M1). (I) is used to disease associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purplied or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B. The present sequence represents example from the present invention
                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptides derived from Streptococcus agalactiae are useful to provide detection of, and vaccination against, Group B Streptococcus infections, particularly to prevent infection in neonatals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Group B Streptococcus, encapsulated bacterium, therapeutic, sepsis,

                                                                                                                                                                                                                                                                                                                                      the invention fracts to an independent of a cell. Also included are:

(1) a vector comprising a promiter of a cell. Also included are:

(1) a vector comprising a promiter of a cell. Also included are:

(1) a vector comprising a promiter operably linked to the nucleic acid

choolypeptide whose expression is inhibited by the antisense

nucleic acid; (2) a host cell containing the vector; (3) an isolated

cholypeptide or its fragment whose expression is inhibited by the

antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

cholypeptide; (5) producing the polypeptide; (6) inhibiting cellular

proliferation or the activity of a gene in an operon required for

the polypeptide; (7) identifying a compound that influences the activity of

the gene product or that has an activity against a biological pathway

crequired for proliferation, or that inhibits cellular proliferation; (8)

cepthway in which a proliferation required gene or its gene product lies

or a gene on which the test compound that inhibits proliferation of an

organism acts; (9) manufacturing an antibiotic; (10) profilling a

compound's activity; (11) a culture comprising strains in which the gene

product is overexpressed or underexpressed; (12) determining the extent

cowhich each of the strains is present in a culture or collection of

strains; or (13) identifying the target of a compound that inhibits the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

of the nucleic acid inhibits proliferation of a cell. Also included are:

of the nucleic acid inhibits proliferation of a cell. Also included are:

encoding a polypeptide whose expression is inhibited by the antisense
nucleic acid; (2) a host cell containing the vector; (3) an isolated
polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
proliferation or the activity of a gene in an operon required for
proliferation; (7) identifying a compound that influences the activity of
                         identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences
proliferation of an organism. The antisense nucleic acids are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zyskind JW;

```
the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for callular proliferation to isolate candidate molecules for rational corrections or proliferation in calls other than S. aureus, S. typhimurium, C. The target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense; prokaryotic essential gene; cell proliferation; drug design.

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibitied by the artisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for the proliferation or that has an activity against a biological pathway required for proliferation or that inhibits cellular proliferation of an compound that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a pathway in which a proliferation-required gene or its gene product lies or organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, activity; (11) a culture comprising strains in which the gene product is overaxpressed; (12) determining the extent to product is overaxpressed or underexpressed; (12) determining the extent to the which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the compound discovery programs. Or for screening for monologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. arruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WY.

C the target proversed for the printed specification, but was obtained in electronic acids are accounted for prolife
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

the 613 antisenee sequences given in the specification where expression of the following relates to an isolated of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense concing a polypeptide whose expression is inhibited by the acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for companied for proliferation, (7) identifying a compound that inhibits proliferation (8) identifying a gene required for cellular proliferation or the become companied for cellular proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, s activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to operate or underexpressed; (12) determining the extent compound that inhibits proliferation of an organism. The antisense uncleic acids required for cellular proliferation to isolate candidate molecules for rational correlating for homologous mucleic acids acids required for proliferation in cells other than S. aureus, S. typhhmurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target profarryoric essential genes noncleic acids acids required for proliferation in cells other than S. aureus, S. typhhmurium, ce the target profarryoric essential genes proliferation, but was obtained in electronic format directly from WIPO at the sequence as a sequence of the present sequence is encoded by one of the present discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                    The invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antisense; prokaryotic essential gene; cell proliferation; drug design

                                                                                                                                                                                                                                                                                                  the nucleic acid inhibits proliferation of a cell. Also included are:

the 6213 antisense sequences given in the specification where expression

of the nucleic acid inhibits proliferation of a cell. Also included are:

concluding a polypeptide whose expression is inhibited by the antisense

concloing a polypeptide whose expression is inhibited by the antisense

contisense nucleic acid; (4) an antibody capable of specifically binding

contisense nucleic acid; (4) an antibody capable of specifically binding

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

control or the activity of a gene in an operon required for

proliferation, (7) identifying a compound that influences the activity of

the gene product or that has an activity against a biological pathway

control or proliferation, or that inhibits cellular proliferation; (8)

dentifying a gene required for cellular proliferation of an

confound's activity; (11) aculture or collection of an

confound's activity; (11) aculture compound that inhibits proliferation of an

compound's activity; (11) aculture compound that inhibits the extent

compound's activity; (11) aculture compound that inhibits the

compound's activity; (11) aculture compound that inhibits the

compound's activity; (11) aculture compound that inhibits the

product is overexpressed or underexpressed; (12) determining the extent

compounds; or (13) identifying the target of a compound that inhibits the

confounds; or (13) identifying the target of a compound cidle required

confounds; or (13) identifying the target of a compound cidle are useful for

conduct is overexpressed or underexpressed; (12) determining are useful for

conduct is overexpressed or underexpressed; (12) determining are useful for

conduct is overexpressed or underexpressed; (13) inhibits the

confounds; or (13) identifying the target conduct and order are useful for

conduct is overexpressed or or isolate conduct acids are usefu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
the target prokaryotic essential genes. Note: The sequence data for this
patent did not form part of the printed specification, but was obtained
in electronic format directly from WIPO at
ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium.
                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid comprising any one of

The invention relates to an isolated nucleic acid derived from
Enterococcus faccium encoding an Enterococcus faccium polypeptide having
One of 10 fully defined sequences given in the (or comprising 40
sequential nucleotides chosen from any of the nucleic acids, its
complement or sequences hybridising to it). Also included are a
recombinant vector comprising the nucleic acid operably linked to
transcription regulatory element, a cell comprising the vector and a
single-stranded probe comprising the nucleic acid. The nucleic acids are
chosen from 364 disclosed sequences encoding 3654 disclosed proteins.
The nucleic acids is useful for diagnosing pathological conditions
cresulting from E. faccium bacterial infection (e.g. urinary tract
infection, bacteraemia, endocarditis, wounds and abdominal-pelvic
infection, and for screening drugs such as agonists and antagonists. The
nucleic acid is useful for recombinant production of Candida albicans
derived peptides or antisense polypeptides. Pharmaceutical compositions
and vaccines containing the nucleic acid are useful for preventing or
treating Enrococcus faecium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic species. The proteins of the invention are useful for related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at [tp.wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઢ
                                                                                                                                                                                                                                                                                                                                                        The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71256 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a streptococcus bample. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be manigitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therexpecification as molecular trasques for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as templates for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology.                                                                                                                                                                                                                                                                                ö
              species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yegurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at the patent of published by the sequences. the invention relates to an instruction acts compileration of the nucleic acid inhibits proliferation of a cell. Also included are:

Co the nucleic acid inhibits proliferation of a cell. Also included are:

Co the nucleic acid inhibits proliferation of a cell. Also included are:

Co (1) a vector comprising a promoter operably linked to the nucleic acid

encoding a polypeptide whose expression is inhibited by the antisense

co nucleic acid; (2) a host cell containing the vector; (3) an isolated

co polypeptide or its fragment whose expression is inhibited by the

co proliferation or the activity of a gene in an operon required for

co proliferation or the activity of a gene in an operon required for

co proliferation or that has an activity against a biological pathway or the gene product or that has an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation; (8)

cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a

corganism acts; (9) manufacturing an antibiotic; (10) profiling a

compound's activity; (11) a culture comprising strains in which the gene

conduct is overexpressed or underexpressed; (12) determining the extent

conduct is overexpressed or underexpressed; (12) determining the extent

contains; or (13) identifying the target of a compound that inhibits the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zyskind JW;

```
proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fix.
                                                                                                                                                                                                                                                                                                                  Sequence 506 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequence (Sequen

Sequence 18697, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
PAPLICATION:
MICHER OF INVENTION:
TITLE OF INVENTION:
TITLE OF INVENTION:
AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION:
TITLE OF INVENTION:
AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT PILLING DATE: 1099-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 18697

LENTH: 543
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: PXE International, Inc.
APPLICANT: PXE International, Inc.
APPLICANT: University of Hawaii
TITLE OF INVENTION: Mutations in a gene encoding an ABC transporter (MRP6) causing
TITLE OF INVENTION: Peeudoxanthoma Elasticum
FILE REFERENCE: PXE-001
CURRENT APPLICATION NUMBER: US/09/792,616
CURRENT FILING DATE: 2001-02-23
NUMBER OF SEQ ID NOS: 27
SOFTWARE: Patentin version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rucations in a gene encoding an ABC transporter (MRP6) causing
Pseudoxanthoma Elasticum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 h 84.6%; Score 33; DB 4; Length 1498; Similarity 57.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                      Sequence 23328, Application US/09252991A

Sequence 23328, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

PAPLICATION: MACLEC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ACRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

PILE REPERBENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-07-18

PRIOR FILING DATE: 1998-07-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 499
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Sequence 19339, Application US/09252991A | Sequence 19339, Application: A sequence 19339, Application: A sequence 19339, Application: A sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19339 | Sequence 19
